Product-led visitor

Solutions → PayX or Fileonn → Verified capabilities and use cases → Request a demonstration / Enquire.

Research-oriented visitor

Insights article → Related capability → Relevant case study → Contact.

02. HOME

PAGE PURPOSE — Make the positioning immediately clear, then earn attention with relevance and evidence.

Suggested URL	/
SEO title	Technology Consulting & Business Process Automation | Einao Solutions
Meta description	Einao helps organisations improve operations through technology consulting, process automation, enterprise solutions, and custom digital systems.

Section 1 — Hero

H1: We build the systems that keep organizations moving.

Einao helps organizations solve operational challenges through technology consulting, process automation, enterprise solutions, and custom digital development.

CTA: Start a Conversation | Destination: /contact/

CTA: Explore Our Capabilities | Destination: /capabilities/

Supporting visual: an editorial composition using real system interfaces, a carefully art-directed workflow, or project imagery. Avoid generic stock photos, decorative AI imagery, and invented product interfaces.

Our perspective

Digital transformation is not simply the act of moving a process online. If the underlying process is unclear, fragmented, or unnecessarily complicated, digitising it can preserve the same problems in a new format.

We look at how work moves through an organisation: how information is captured, where decisions happen, how teams coordinate, which systems are involved, and what makes delivery difficult. That understanding shapes the solution.

Sometimes the right intervention is process redesign. Sometimes it is automation or integration. Sometimes a new system is required. The aim is to make technology serve a defined operational need.

Section 2 — The operational reality

H2: When operations become complicated, the whole organisation feels it.

Slow approvals, repeated data entry, disconnected systems, and unclear process ownership make work harder to manage. Einao helps identify what is causing the friction and define a practical response.

CTA: Talk Through an Operational Challenge | Destination: /contact/

Section 3 — Our approach

H2: Understand the requirement before choosing the technology.

Consult

Clarify the problem, assess current processes and systems, and define requirements.

Improve

Redesign workflows, reduce avoidable manual work, and improve information flow.

Build

Implement digital platforms, integrations, enterprise applications, and custom software where required.

Section 4 — Capabilities

IT Consulting

Make technology decisions with a clear understanding of the requirements.

CTA: Explore IT Consulting → /capabilities/it-consulting/

Business Process Automation

Improve workflows, structure approvals, and reduce repetitive manual effort.

CTA: Explore Business Process Automation → /capabilities/business-process-automation/

Enterprise Solutions & Digital Development

Build digital platforms, applications, portals, and integrations around defined operating needs.

CTA: Explore Enterprise Solutions → /capabilities/enterprise-solutions/

Section 5 — Institutional experience

H2: Digital services need support beyond launch.

Einao built the IPO Nigeria portal and continues to support its technical operation, maintenance, optimisation, and upgrades. Our engagement with the Federal Ministry of Industry, Trade and Investment's Commercial Law Department dates to 2013.

CTA: Explore the IPO Nigeria Case Study → /work/ipo-nigeria-portal/

Section 6 — Our solutions

Explore Einao products designed for specific operational requirements. Product availability and capabilities vary by solution.

Paydat

A digital payment solution intended to support more structured payment operations and transaction visibility.

CTA: Explore Paydat → /solutions/paydat/

Fylonn

A modular application and processing management platform in development, designed around the lifecycle of applications and requests.

CTA: Explore Fylonn → /solutions/fylonn/

IP PRO

Intellectual property management software used in the IPO Nigeria portal engagement.

CTA: Explore IP PRO → /solutions/ip-pro/

Section 7 — Who we work with

- **Government & public institutions** — Digital systems for complex processes, information, and service delivery.
- **Businesses & corporates** — Technology that helps structure operations and connect systems.
- **Regulatory & service organisations** — Digital workflows for defined applications, reviews, and requests.

CTA: Explore Industries → /industries/

Section 8 — Insights

H2: Better systems begin with better questions.

Explore practical perspectives on technology strategy, process automation, enterprise systems, and digital service delivery.

CTA: Explore Insights → /insights/

Section 9 — Closing CTA

H2: What does your organisation need to do better?

Tell us about the process, system, or service you need to improve. We'll start by understanding the requirement.

CTA: Start a Conversation → /contact/

04. ABOUT EINAO

PAGE PURPOSE — Establish the company's identity, history, principles, and leadership without making unsupported claims.

Suggested URL	/about/
SEO title	About Einao Solutions | Enterprise Technology & Digital Transformation
Meta description	Learn about Einao Solutions, an established technology company helping organisations improve operations through consulting, automation, and digital systems.

Hero

Eyebrow: ABOUT EINAO

H1: Technology should work around the organisation—not the other way around.

Einao Solutions Limited helps organisations understand operational challenges and respond with practical technology. Our work connects consulting, process improvement, automation, and digital solution delivery.

Our perspective

Digital transformation is not simply the act of moving a process online. If the underlying process is unclear, fragmented, or unnecessarily complicated, digitising it can preserve the same problems in a new format.

We look at how work moves through an organisation: how information is captured, where decisions happen, how teams coordinate, which systems are involved, and what makes delivery difficult. That understanding shapes the solution.

Sometimes the right intervention is process redesign. Sometimes it is automation or integration. Sometimes a new system is required. The aim is to make technology serve a defined operational need.

Our history

Founded in 2011, Einao Solutions has developed its work around technology consulting and digital solutions for organisational needs. Its engagement with the Federal Ministry of Industry, Trade and Investment's Commercial Law Department dates to 2013 and includes work on the IPO Nigeria portal, alongside ongoing technical support and system improvement.

This history is one part of Einao's broader identity: a technology partner focused on helping organisations address operational requirements through appropriate digital systems.

How we work

Understand before building

We clarify the problem, users, process, constraints, and intended outcomes before deciding on the technology.

Solve the actual problem

We distinguish between a process problem, an integration problem, an automation opportunity, and a requirement for a new system.

Design for the operating environment

Solutions must make sense for the people, workflows, information, and practical conditions in which they will be used.

Treat implementation as part of the work

Technology creates value when it is implemented in a way that supports real use, with maintenance and improvement addressed where they form part of the engagement.

Leadership

Einao Solutions was founded by Collins Nkwoji, MBA, CPA, FCA, FCIT.

Recommended design: a considered founder/leadership profile with a professional portrait, concise biography approved by the founder, and a clear explanation of the experience and perspective he brings. Do not invent career history, awards, memberships beyond the credentials supplied, or personal quotations.

Our vision and mission

Proposed mission copy, aligned with the company's stated direction: We design and implement digital solutions that simplify operations, improve processes, and help organisations work more effectively.

Existing vision wording supplied for review: To become a foremost IT solutions provider that empowers organisations to operate smarter, faster, and more efficiently through digital solutions. Management should confirm the final approved wording before publication.

CTA: Explore Our Capabilities | Destination: /capabilities/

05. CAPABILITIES OVERVIEW

PAGE PURPOSE — Help visitors understand the difference between the services and select the right route.

Suggested URL	/capabilities/
SEO title	Technology Consulting, Process Automation & Digital Solutions | Einao
Meta description	Explore Einao's IT consulting, business process automation, enterprise solutions, system integration, and custom digital development capabilities.

Hero

H1: The right technology starts with the right understanding.

Einao works across the path from operational diagnosis to digital implementation. We help organisations define the problem, improve the process, and deliver the systems required to support better ways of working.

Capability 1 — IT Consulting

Make the right decisions before implementation begins.

We help organisations understand requirements, examine current processes and systems, evaluate solution approaches, and define a practical direction for technology initiatives.

- Business and process analysis
- Requirements definition
- Workflow and process mapping
- Technology and solution assessment
- Solution architecture and implementation planning

CTA: Explore IT Consulting | Destination: /capabilities/it-consulting/

Capability 2 — Business Process Automation

Reduce avoidable manual work and improve how work moves.

We examine workflows, identify repetitive effort and bottlenecks, and design appropriate automation and integration to support clearer processes and more consistent information flow.

- Process optimisation
- Workflow automation
- Digital approvals and escalations
- System integration
- Automated reporting and process visibility

CTA: Explore Business Process Automation | Destination: /capabilities/business-process-automation/

Capability 3 — Enterprise Solutions & Digital Development

Implement the systems your organisation actually needs.

We design and implement digital platforms, business applications, portals, workflow systems, integrations, and custom software around defined operational and service-delivery requirements.

- Enterprise applications and workflow systems
- Digital portals and service platforms
- Custom software and business applications
- Information and document workflows
- Integration of relevant systems and services

CTA: Explore Enterprise Solutions | Destination: /capabilities/enterprise-solutions/

06. IT CONSULTING

PAGE PURPOSE — Explain the advisory work in practical terms and show what a client can expect.

Suggested URL	/capabilities/it-consulting/
SEO title	IT Consulting & Technology Strategy | Einao Solutions
Meta description	Define requirements, assess business processes, evaluate technology options, and plan digital initiatives with Einao's IT consulting services.

Hero

H1: Make technology decisions with the problem clearly defined.

Technology projects can become expensive and difficult to deliver when requirements are unclear, workflows are poorly understood, or tools are selected before the organisation knows what it needs. Einao helps teams establish a clearer view of the operational problem and the technology response it calls for.

CTA: Discuss a Consulting Requirement | Destination: /contact/

What we help clarify

Business and process analysis

Understand current activities, stakeholders, information needs, dependencies, and sources of friction.

Requirements definition

Translate stakeholder needs into clear functional requirements, workflows, user roles, data needs, and constraints.

Process mapping

Make hand-offs, approvals, decision points, exceptions, and dependencies visible.

Technology assessment

Assess whether process redesign, automation, integration, configuration, or custom development is appropriate.

Solution planning

Define scope, components, dependencies, priorities, and practical implementation considerations.

A practical engagement

01 — Understand

Establish the business context, users, existing systems, constraints, and desired outcome.

02 — Analyse

Review processes, requirements, information flows, and the causes of the current difficulty.

03 — Define

Document the problem, priorities, solution options, and relevant implementation considerations.

04 — Plan

Set out the proposed scope, dependencies, delivery priorities, and next steps.

When to engage us

- Your organisation is considering a new system but has not yet defined its requirements.
- Teams rely on manual workarounds or unclear processes.
- Existing applications do not adequately support the way work is done.
- A digital initiative needs a clearer scope and implementation direction.
- You need to understand whether to automate, integrate, configure, or build. **CTA:** Bring Us the Requirement | Destination: /contact/

07. BUSINESS PROCESS AUTOMATION

PAGE PURPOSE — Make automation tangible, realistic, and tied to operational work.

Suggested URL	/capabilities/business-process-automation/
SEO title	Business Process Automation & Workflow Solutions | Einao Solutions
Meta description	Improve workflows with process redesign, digital approvals, workflow automation, system integration, and operational reporting tailored to your organisation.

Section 1 — Hero

H1: Make the workflow work better.

Einao helps organisations identify unnecessary steps, reduce repetitive work, structure approvals, and improve the flow of information across processes.

CTA: Discuss a Process → /contact/

Section 2 — What can be improved

Process optimisation

Identify duplicated effort, avoidable hand-offs, and unclear responsibilities before deciding what to automate.

Workflow automation

Structure recurring activities, task assignments, notifications, and process stages.

Digital approvals and escalations

Define routes for review, approval, rejection, and escalation appropriate to the process.

System integration

Connect applications and services where technically feasible to reduce repeated data entry and manual transfers.

Reporting and visibility

Make process activity easier to review and reduce effort spent compiling routine operational information.

Section 3 — Potential use cases

- Application, request, and case processing
- Internal approvals and document review
- Customer and service requests
- Data movement between business systems
- Routine notifications and operational reporting

Specific capabilities depend on the process, systems, data, and agreed scope. Not every workflow or integration is supported out of the box.

Section 4 — Our approach

We assess the current process, define the intended outcome, identify what should change, and determine the appropriate combination of process redesign, automation, and integration. The objective is to improve the operation—not automate every step.

CTA: Identify a Workflow to Improve → /contact/

08. ENTERPRISE SOLUTIONS & DIGITAL DEVELOPMENT

PAGE PURPOSE — Present technical delivery depth without making unsupported promises about specific platforms.

Suggested URL	/capabilities/enterprise-solutions/
SEO title	Enterprise Solutions & Custom Software Development | Einao Solutions
Meta description	Einao designs enterprise applications, digital portals, workflow systems, integrations, and custom software around organisational requirements.

Section 1 — Hero

H1: Build the digital systems your organisation actually needs.

When standard tools do not fit an organisation's workflows, information structures, service model, or integration needs, Einao designs and implements systems around the defined requirement.

CTA: Discuss a Digital Solution → /contact/

Section 2 — What we deliver

Enterprise applications and workflow systems

Support structured processes such as assessment, approval, case handling, and status tracking.

Digital portals and service platforms

Provide digital access points for submitting requests, supplying information, uploading documents, and following service progress where those capabilities are in scope.

Custom software and business applications

Design software around operational requirements that existing tools do not adequately support.

Document and information workflows

Organise how information is submitted, reviewed, retrieved, and moved across a process.

System integration

Connect applications, services, and data flows where technically feasible and agreed.

Implementation and improvement

Support deployment, maintenance, and subsequent improvement where included in the engagement.

Section 3 — Designed around requirements

The scope of each engagement defines the relevant platforms, integrations, hosting, security controls, performance targets, support, and maintenance arrangements.

CTA: Tell Us What You Need to Build → /contact/

09. SOLUTIONS OVERVIEW

PAGE PURPOSE — Give the solution portfolio a coherent home while separating product-specific facts from broader capabilities.

Suggested URL	/solutions/
SEO title	Enterprise Solutions & Digital Systems | Einao Solutions
Meta description	Explore Einao's digital solutions and enterprise systems for payment processes, organisational workflows, and specific operational requirements.

Section 1 — Hero

H1: Digital solutions for specific operational needs.

Einao's product portfolio addresses different requirements, from payment operations to institutional intellectual property management and application processing. Explore each product or contact us to discuss its current capabilities and suitability.

Section 2 — Paydat

A digital payment solution intended to help organizations manage payment activity with greater structure and visibility.

CTA: Explore Paydat → /solutions/paydat/

Section 3 — Fylonn

A modular application and processing management platform in development, designed to connect the stages involved in handling applications and requests.

CTA: Explore Fylonn → /solutions/fylonn/

Section 4 — IP PRO

Intellectual property management software used in the IPO Nigeria portal engagement for institutional application and registry processes.

CTA: Explore IP PRO → /solutions/ip-pro/

Section 6 — Custom enterprise solutions

When a requirement needs a tailored approach, Einao can assess the operating model and define an appropriate digital solution, integration, or development scope.

CTA: Discuss a Custom Requirement → /contact/

10. PAYDAT PRODUCT PAGE

PAGE PURPOSE — Create a credible product page without publishing unverified payment claims.

Suggested URL	/solutions/paydat/
SEO title	PayX Digital Payment Solution | Einao Solutions
Meta description	Discuss PayX with Einao to explore a more structured approach to digital payment collection, transaction visibility, and payment reporting.

H1: Bring greater structure to payment operations.

Paydat is a digital payment solution for organisations seeking a more structured way to manage payment activity and maintain visibility over transactions.

CTA: Discuss Paydat → /contact/

Section 2 — Payment operations, made clearer

Payment activity can involve multiple channels, records, teams, and reconciliation steps. Paydat is positioned to support a clearer view of payment operations. The right fit depends on the organisation's payment model and confirmed product capabilities.

Section 3 — Discuss your requirements

Tell us how your organisation collects payments, where visibility becomes difficult, and what your team needs to manage more effectively. We can discuss the available capabilities and next steps.

CTA: Enquire About Paydat → /contact/

Internal publication check: confirm supported payment channels and providers, transaction tracking, reconciliation, reporting, integrations, security controls, implementation, support, and pricing before making specific claims.

11. FYLONN PRODUCT PAGE

PAGE PURPOSE — Reserve a clear product destination while leaving unverified functionality out of public copy.

Suggested URL	/solutions/Fylonn/
SEO title	Fylonn Digital Workflow Solution | Einao Solutions
Meta description	Contact Einao to learn about Fylonn and discuss whether its verified capabilities fit your organisation's workflow requirements.

12. FYLONN

1. Hero Section

Image suggestion: A central Fylonn platform connected to customer submissions, internal workflows, publication, customer support, and performance reporting.

Headline

Manage Applications. Connect Processes. Improve Service Delivery.

Subheading

Fylonn is a modular application and processing management platform designed to help organisations digitise, coordinate and monitor applications, requests and operational processes from initiation to completion.

Bring application intake, internal processing, communication and operational oversight into a connected environment built around the way your organisation works.

Primary CTA: Explore the Platform

2. Introduction: More Than a Place to Submit Applications

From Receiving Requests to Managing the Entire Process

Fylonn is designed to support the journey from the moment a request is submitted to the point at which it is processed, communicated, and monitored.

Rather than treating each stage as an isolated activity, the platform brings related functions together so organisations can work towards more coordinated and visible service delivery.

From the first submission to the final outcome, Fylonn provides a foundation for more coordinated, traceable and manageable operations.

3. The Problem We Address

When Processes Are Disconnected, Progress Becomes Harder to Manage

Suggestion: Make this into cards

Organisations handling applications, requests and operational cases often encounter challenges that extend beyond the initial submission.

1. **Fragmented Processes**

Information, documents and activities are distributed across multiple systems, departments or manual records, making it difficult to maintain a consistent view of each application.

2. **Manual Coordination**

Staff spend time assigning tasks, transferring information, following up on pending work and confirming processing status.

3. **Limited Process Visibility**

Applicants and requesters may struggle to understand the progress of their submissions, while internal teams may lack a clear view of outstanding actions.

4. **Difficult Operational Oversight**

Managers need reliable information about processing volumes, pending work, turnaround times and workload distribution to make informed decisions.

5. **Rigid or Costly Solutions**

Organisations may find that generic software does not adequately reflect their procedures, while fully bespoke systems can require significant development and maintenance.

SOLUTIONS

- More Coordinated Operations
- Greater Process Visibility
- More Consistent Procedures
- Reduced Administrative Burden
- Better-Informed Decisions
- Progressive Adoption

Fylonn is being developed to address these challenges through reusable capabilities, configurable workflows and connected process management.

4. The Fylonn Approach

RCC FRAMEWORK

Fylonn combines three foundational elements to support end-to-end process management.

Reusable Functional Modules

Access a structured set of capabilities designed around common operational needs, from receiving applications to managing internal processing and monitoring performance.

Configurable Workflows

Adapt supported process stages, responsibilities and rules to reflect your organisation's procedures and operational requirements.

Connected Process Management

Create a more coordinated environment for managing applications and requests, tracking progress, supporting decisions and maintaining visibility throughout the processing lifecycle.

The objective is to reduce the need to build every solution from scratch while giving organisations the flexibility to manage their processes appropriately.

5. Explore the Fylonn Modules

One Platform. Five Connected Systems.

Suggestion: A web image showing fylonn as the central product that branches into the 5 modules. And the styliced description: Receive -> Process -> Decide and Complete -> Communicate and support-> monitor and improve

Fylonn comprises five complementary modules. Each addresses a distinct operational need, with the wider platform designed to connect relevant capabilities into a more complete process management solution tailored to your organisation's needs and implementation requirements.

Fylonn Connect

Application and Request Intake

Provides the customer-facing entry point for applications, submissions, service requests, and supporting information.

The starting point for bringing external requests into an organised process.

Fylonn Flow

Back-Office Processing

Supports the internal handling of applications and requests as they move through operational workflows.

The working environment for managing the steps behind service delivery.

Fylonn Publish

Publication and Journal Management

Supports publication-related activities and the organisation of records, such as applications, directories, and journal-oriented processes where required.

Designed for processes where decisions, records, or other information must be compiled for publication.

Fylonn Assist

Customer Support and Case Management

Supports the management and resolution of enquiries, support requests, and related cases associated with an organisation's services.

Helps bring customer issues into a more structured support process.

Fylonn Insight

Operational Performance and Intelligence

Provides a foundation for monitoring operational and financial activity and presenting performance information to support management oversight and decision-making.

Helps turn process activity into information that can inform operational decisions.

The scope and availability of individual capabilities will depend on the stage of development and the agreed implementation.

Explore: Operational visibility and performance monitoring.

CTA: Discuss Your Requirements

Module capabilities, integration arrangements and independent deployment options are subject to product development and technical validation.

7. Who Fylonn Is For

Designed for Organisations That Manage Structured Processes

Suggestion: Two Column Cards with visuals

Government and Public Institutions

Support the management of formal applications and institutional processes through structured workflows and improved visibility into processing activities.

Potential applications include registrations, renewals, licences, permits, regulatory applications, claims, recordals and formal requests.

CTA: Explore Institutional Applications

Private Businesses and Service Providers

Coordinate recurring business processes, reduce manual follow-ups and improve visibility into customer-facing and internal operations.

Potential applications include customer onboarding, service requests, internal approvals, document verification, complaints and administrative workflows.

8. Frequently Asked Questions

What is Fylonn?

Fylonn is a modular application and processing management platform being developed by Einao Solutions Limited. It is intended to help organisations digitise, coordinate, manage and monitor applications, requests and structured operational processes from initiation to completion.

Who is Fylonn designed for?

Fylonn is intended for government institutions, regulatory bodies, service providers and private businesses that manage structured applications, requests or operational cases.

What types of processes can Fylonn support?

Potential use cases include registrations, renewals, licences, permits, customer onboarding, service requests, internal approvals, document reviews, publication procedures and case management. Suitability depends on the specific workflow and product capabilities available.

What are the five Fylonn modules?

The proposed modules are Connect for application and request intake, Flow for internal processing, Publish for publication and journal management, Assist for customer support and case management, and Insight for operational performance and intelligence.

Can organisations use individual modules?

The product is being designed around modular adoption. The ability to deploy each module independently will depend on its technical dependencies and the final product architecture.

Can Fylonn accommodate our existing procedures?

Fylonn's intended approach combines reusable functionality with configurable workflows. A requirements assessment would establish how your procedures can be supported through standard functionality, configuration or additional development.

Is Fylonn available for implementation?

Fylonn is being developed progressively, with generic functional prototypes planned for its proposed modules. Product readiness and implementation availability should be confirmed with Einao Solutions Limited.

How can we explore Fylonn for our organisation?

Contact Einao Solutions Limited to discuss your current processes, operational challenges and requirements, and to explore the potential fit of Fylonn.

11. Final Call to Action

Le Adopt Le Grow! Adopt what you need. Build towards an effective and productive system

Every organisation has processes that depend on information, people, decisions and timely action. The challenge is bringing them together in a way that works.

Whether you are looking to organise application intake, coordinate internal processing, structure customer support, or improve operational visibility, start a conversation with **Us** about your organisation's needs and how Fylonn may support them.

15. WORK AND CASE STUDIES

PAGE PURPOSE — Use evidence to demonstrate the nature of the work and the operational demands it addresses.

Suggested URL	/work/
SEO title	Digital Transformation Projects & Case Studies | Einao Solutions
Meta description	Explore selected work involving institutional digital platforms, technology consulting, process improvement, and enterprise solutions delivered or supported by Einao.

Section 1 — Hero

H1: The work behind systems people rely on.

Our case studies explain the context, the operational challenge, Einao's role, and the work involved. Each case study uses only details approved for publication.

Section 2 — Featured case study: IPO Nigeria Portal

Institutional digital platform | Federal Ministry of Industry, Trade and Investment — Commercial Law Department.

Einao built the IPO Nigeria portal and continues to support its technical operation, maintenance, optimisation, and upgrades. The engagement dates to 2013.

CTA: Read the Case Study → /work/ipo-nigeria-portal/

Section 3 — Future case studies

The context

Describe the organisation and service environment, using only details approved for disclosure.

The challenge

Explain the operational problem, constraints, users, or service requirement.

Einao's role

State precisely whether Einao consulted, designed, built, integrated, maintained, supported, or upgraded the system.

The approach

Describe the work and decision-making process at a level approved by the client.

The system or intervention

Explain the relevant capabilities without exposing sensitive information.

The evidence

Use verified metrics, approved client statements, or concrete deliverables. Do not invent outcomes.

What continued after implementation

Where accurate, explain ongoing support, maintenance, optimisation, or upgrades.

(There should be a way for us to keep editing this and adding case studies with time)

16. CASE STUDY — IPO NIGERIA PORTAL

PAGE PURPOSE — Tell a substantive story while accurately representing Einao's role.

Suggested URL	/work/ipo-nigeria-portal/
SEO title	IPO Nigeria Portal Case Study | Einao Solutions
Meta description	Read about Einao's work building and supporting the IPO Nigeria portal for the Federal Ministry of Industry, Trade and Investment's Commercial Law Department.

Section 1 — Hero

Eyebrow: SELECTED INSTITUTIONAL WORK

H1: Supporting the digital processes behind intellectual property services.

Einao's engagement with the Federal Ministry of Industry, Trade and Investment's Commercial Law Department dates to 2013. Einao built the IPO Nigeria portal and continues to support its technical operation, maintenance, optimisation, and upgrades.

Section 2 — The operational context

Intellectual property application processes require structured information submission and processing. The IPO Nigeria portal supports processes relating to trademarks, patents, and industrial designs.

Section 3 — Einao's role

Einao's work includes portal development and ongoing technical support, maintenance, optimisation, and upgrades. The portal and the underlying government service remain distinct from Einao's role as technology provider.

Section 4 — Why ongoing support matters

A digital platform requires attention after launch as operational requirements evolve and technical improvements become necessary. Ongoing support helps maintain the system and address agreed technical needs.

Section 5 — Project metrics

Historical figures supplied for review include more than 53,000 registered users and more than 400,000 applications processed. Publish these figures only after confirming the current values, reporting period, definitions, and approval to disclose them.

Section 6 — What the engagement demonstrates

- Experience building and supporting an institutional digital service.
- The importance of connecting technical delivery with operational requirements.
- The role of maintenance and improvement after launch.

Related capabilities: IT Consulting • Enterprise Solutions & Digital Development

CTA: Discuss an Institutional Digital Requirement → /contact/

Meta description	Contact Einao Solutions to discuss IT consulting, business process automation, enterprise systems, integrations, or a custom digital solution.

Hero

H1: Tell us what your organisation needs to do better.

Whether you are improving an existing process, planning a digital platform, considering automation, or trying to connect systems, start by telling us what is happening. We will use the conversation to understand the requirement and identify an appropriate next step.

Enquiry form fields

- Full name (required)
- Work email (required)
- Organisation (required)
- Role or department (optional)
