FULL WEBSITE COPY & EXPERIENCE BLUEPRINT

01. BRAND STRATEGY AND MESSAGING SYSTEM

PAGE PURPOSE — Create one consistent story across every page and every visitor touchpoint.

Brand promise

Technology that works around the realities of your organisation.

Primary brand line

We build the systems that keep organisations moving.

Supporting proposition

Einao connects operational understanding with technology delivery. We help organisations diagnose process problems, improve workflows, connect systems, and implement digital solutions designed around the work that needs to get done.

The problem

As organisations grow, their processes can become fragmented. Information sits across different tools, routine tasks depend on manual follow-up, approvals slow down, reporting takes too long, and teams lose visibility into the status of work. Adding software without understanding these conditions can digitise the same inefficiencies.

Einao begins with how the organisation actually operates. The appropriate response may be process redesign, automation, system integration, an enterprise solution, or custom development. The technology follows the requirement.

Message pillars

Operational understanding

Start with the process, users, information, constraints, and intended outcome.

Practical transformation

Improve how work moves through an organisation: clearer workflows, less avoidable manual effort, and better visibility.

Technical delivery

Translate requirements into digital platforms, enterprise applications, integrations, and systems built around real operating needs.

Institutional experience

Use Einao's established history and work supporting the IPO Nigeria portal as evidence of experience, with precise wording about Einao's role.

Long-term partnership
Where contracted, support, maintain, optimise, and upgrade systems as requirements evolve.

Audience priorities

- Government and public institutions managing applications, approvals, records, payments, and public-facing services.
- Businesses and corporates seeking stronger operational structure, connected systems, and scalable processes.
- Regulatory and service organisations with complex workflows and information requirements.
- Education, nonprofit, and development organisations where verified experience and relevant solutions support their needs.

02. SITE ARCHITECTURE AND VISITOR FLOW

PAGE PURPOSE — Give visitors clear routes based on what they need to solve.

Primary navigation

Work | Capabilities | Solutions | Industries | Insights | About | Start a Conversation

Recommended dropdowns: Work → Case Studies; Capabilities → IT Consulting, Business Process Automation, Enterprise Solutions & Digital Development; Solutions → PayX, Fileonn, Custom Enterprise Systems; Industries → Government & Public Institutions, Business & Corporate, Regulatory & Service Organisations.

Recommended sitemap

- Home (/)
- About (/about/)
- Capabilities (/capabilities/)
- IT Consulting (/capabilities/it-consulting/)
- Business Process Automation (/capabilities/business-process-automation/)
- Enterprise Solutions & Digital Development (/capabilities/enterprise-solutions/)
- Solutions (/solutions/)
- PayX (/solutions/payx/)

- Insights (/insights/)
- Individual insight articles
- Contact / Start a Conversation (/contact/)
- Privacy Notice and Terms of Use

Core visitor journeys

Institutional decision-maker

Home → Institutional experience → IPO Nigeria case study → Relevant capability → Start a Conversation.

Operations leader

Home → Operational challenge → Business Process Automation → Approach and use cases → Contact form.

Technology or IT lead

Home → IT Consulting / Enterprise Solutions → Delivery approach → Case study → Technical enquiry.

Product-led visitor

Solutions → PayX or Fileonn → Verified capabilities and use cases → Request a demonstration / Enquire.

Research-oriented visitor

Insights article → Related capability → Relevant case study → Contact.

Conversion principle

Do not force every visitor into one generic contact route. Use context-specific calls to action—discuss a requirement, explore a case study, request a PayX demonstration, or enquire about Fileonn—while keeping a consistent path to the main contact page.

03. HOME

PAGE PURPOSE — Make the positioning immediately clear, then earn attention with relevance and evidence.

Suggested URL	/
SEO title	Technology Consulting & Business Process Automation | Einao Solutions
Meta description	Einao helps organisations improve operations through technology consulting, process automation, enterprise solutions, and custom digital systems.

Section 1 — Hero

H1: We build the systems that keep organisations moving.

Einao helps organisations improve how they operate through technology consulting, business process automation, enterprise solutions, and custom digital development. We turn operational challenges into systems that work.

CTA: Start a Conversation | Destination: /contact/

CTA: Explore Our Capabilities | Destination: /capabilities/

Supporting visual: an editorial composition using real system interfaces, a carefully art-directed workflow, or project imagery. Avoid generic stock photos, decorative AI imagery, and invented product interfaces.

Section 2 — The operational reality

H2: When operations become complicated, the whole organisation feels it.

Slow approvals. Repetitive data entry. Disconnected applications. Unclear process ownership. Difficult-to-track transactions. Reports that take too long to prepare. Work that depends on follow-ups, spreadsheets, or institutional memory.

These are not isolated inconveniences. Over time, they affect service delivery, productivity, accountability, cost control, and an organisation's ability to grow. Einao helps identify what is causing the friction and determine what needs to change.

CTA: Talk Through an Operational Challenge | Destination: /contact/

Section 3 — Our approach

H2: Understand the operation before choosing the technology.

Technology is not always the starting point. Sometimes a process needs to be redesigned. Sometimes existing systems need to communicate. Sometimes repetitive work should be automated. And sometimes the organisation needs a new digital system.

We begin by understanding the difference.

CONSULT

Analyse processes, clarify requirements, understand users and constraints, and establish a practical technology direction.

AUTOMATE

Improve workflows, reduce avoidable manual effort, structure approvals, and make information flow more effectively.

BUILD

Implement enterprise solutions, integrations, digital platforms, and custom software around the requirements.

CTA: Explore Our Capabilities | Destination: /capabilities/

Section 4 — Capabilities

IT Consulting

Make technology decisions with a clear understanding of the problem. We help assess processes, define requirements, map workflows, and establish the right solution direction before implementation.

CTA: Explore IT Consulting | Destination: /capabilities/it-consulting/

Business Process Automation

Make workflows easier to manage. We identify bottlenecks, redesign repetitive activities, structure approvals, connect systems, and improve visibility across operational processes.

CTA: Explore Business Process Automation | Destination: /capabilities/business-process-automation/

Enterprise Solutions & Digital Development

Build systems around the way your organisation works—from enterprise applications and workflow systems to digital portals, integrations, and custom software.

CTA: Explore Enterprise Solutions & Digital Development | Destination: /capabilities/enterprise-solutions/

Section 5 — Institutional experience

H2: Digital infrastructure must work beyond the launch.

Einao has provided IT consulting support to the Federal Ministry of Industry, Trade and Investment's Commercial Law Department since 2013. Einao built the IPO Nigeria portal and continues to support its maintenance, technical operation, optimisation, and upgrades.

The portal supports intellectual property application processes, including trademarks, patents, and industrial designs. It is an example of the operational demands involved in supporting a digital service used by applicants and institutional teams.

Optional metric strip, publish only after management verifies current figures: [Verified registered-user figure] | [Verified applications-processed figure]. Historical figures previously supplied for review were more than 53,000 registered users and more than 400,000 applications processed; confirm date, definitions, and permission before publication.

CTA: Explore the IPO Nigeria Case Study | Destination: /work/ipo-nigeria-portal/

Section 6 — Solutions

H2: Digital solutions for real operational requirements.

Einao's solutions address practical needs such as payment visibility, structured workflows, information handling, and digital service delivery. Each solution should be explained through the problem it addresses, its intended users, and its confirmed capabilities.

PayX

Digital payments with visibility built in.

PayX is positioned for organisations seeking a more structured way to collect and manage digital payments and maintain visibility over transaction activity. Publish detailed channel, reconciliation, integration, and security claims only after the product owner verifies them.

CTA: Request a PayX Demonstration | Destination: /solutions/payx/

Fileonn

Bring organisational work into a more structured digital flow.

Introduce Fileonn through its confirmed use cases and capabilities. Product-specific descriptions should be approved by the product owner before publication.

CTA: Enquire About Fileonn | Destination: /solutions/fileonn/

Section 7 — Who we work with

Government & Public Institutions

Digital systems for organisations managing complex processes, transactions, information, and public-facing services.

Businesses & Corporates

Technology that helps organisations structure operations, improve workflows, and connect systems as they grow.

Regulatory & Service Organisations

Digital processes designed around defined requirements, review stages, records, and service delivery.

Section 8 — Insights

H2: Better systems begin with better questions.

Explore practical thinking on technology strategy, workflow automation, enterprise systems, and the operational decisions behind digital transformation.

CTA: Explore Insights | Destination: /insights/

Section 9 — Closing CTA

H2: Have an operation that needs to work better?

Tell us what is slowing work down, where systems are disconnected, or what your organisation needs to deliver. We will start by understanding the requirement.

CTA: Start a Conversation | Destination: /contact/

04. ABOUT EINAO

PAGE PURPOSE — Establish the company's identity, history, principles, and leadership without making unsupported claims.

Suggested URL	/about/
SEO title	About Einao Solutions | Enterprise Technology & Digital Transformation
Meta description	Learn about Einao Solutions, an established technology company helping organisations improve operations through consulting, automation, and digital systems.

Hero

Eyebrow: ABOUT EINAO

H1: Technology should work around the organisation—not the other way around.

Einao Solutions Limited helps organisations understand operational challenges and respond with practical technology. Our work connects consulting, process improvement, automation, and digital solution delivery.

Our perspective

Digital transformation is not simply the act of moving a process online. If the underlying process is unclear, fragmented, or unnecessarily complicated, digitising it can preserve the same problems in a new format.

We look at how work moves through an organisation: how information is captured, where decisions happen, how teams coordinate, which systems are involved, and what makes delivery difficult. That understanding shapes the solution.

Sometimes the right intervention is process redesign. Sometimes it is automation or integration. Sometimes a new system is required. The aim is to make technology serve a defined operational need.

Our history

Founded in 2011, Einao Solutions has developed its work around technology consulting and digital solutions for organisational needs. Its engagement with the Federal Ministry of Industry, Trade and Investment's Commercial Law Department dates to 2013 and includes work on the IPO Nigeria portal, alongside ongoing technical support and system improvement.

This history is one part of Einao's broader identity: a technology partner focused on helping organisations address operational requirements through appropriate digital systems.

How we work

Understand before building

We clarify the problem, users, process, constraints, and intended outcomes before deciding on the technology.

Solve the actual problem

We distinguish between a process problem, an integration problem, an automation opportunity, and a requirement for a new system.

Design for the operating environment

Solutions must make sense for the people, workflows, information, and practical conditions in which they will be used.

Treat implementation as part of the work

Technology creates value when it is implemented in a way that supports real use, with maintenance and improvement addressed where they form part of the engagement.

Leadership

Einao Solutions was founded by Collins Nkwoji, MBA, CPA, FCA, FCIT.

Recommended design: a considered founder/leadership profile with a professional portrait, concise biography approved by the founder, and a clear explanation of the experience and perspective he brings. Do not invent career history, awards, memberships beyond the credentials supplied, or personal quotations.

Our vision and mission

Proposed mission copy, aligned with the company's stated direction: We design and implement digital solutions that simplify operations, improve processes, and help organisations work more effectively.

Existing vision wording supplied for review: To become a foremost IT solutions provider that empowers organisations to operate smarter, faster, and more efficiently through digital solutions. Management should confirm the final approved wording before publication.

05. CAPABILITIES OVERVIEW

PAGE PURPOSE — Help visitors understand the difference between the services and select the right route.

Suggested URL	/capabilities/
SEO title	Technology Consulting, Process Automation & Digital Solutions | Einao
Meta description	Explore Einao's IT consulting, business process automation, enterprise solutions, system integration, and custom digital development capabilities.

Hero

H1: The right technology starts with the right understanding.

Einao works across the path from operational diagnosis to digital implementation. We help organisations define the problem, improve the process, and deliver the systems required to support better ways of working.

Capability 1 — IT Consulting

Make the right decisions before implementation begins.

We help organisations understand requirements, examine current processes and systems, evaluate solution approaches, and define a practical direction for technology initiatives.

- Business and process analysis
- Requirements definition
- Workflow and process mapping
- Technology and solution assessment
- Solution architecture and implementation planning

CTA: Explore IT Consulting | Destination: /capabilities/it-consulting/

Capability 2 — Business Process Automation

Reduce avoidable manual work and improve how work moves.

We examine workflows, identify repetitive effort and bottlenecks, and design appropriate automation and integration to support clearer processes and more consistent information flow.

- Process optimisation
- Workflow automation
- Digital approvals and escalations
- System integration
- Automated reporting and process visibility

CTA: Explore Business Process Automation | Destination: /capabilities/business-process-automation/

Capability 3 — Enterprise Solutions & Digital Development

Implement the systems your organisation actually needs.

We design and implement digital platforms, business applications, portals, workflow systems, integrations, and custom software around defined operational and service-delivery requirements.

- Enterprise applications and workflow systems
- Digital portals and service platforms
- Custom software and business applications
- Information and document workflows
- Integration of relevant systems and services

CTA: Explore Enterprise Solutions | Destination: /capabilities/enterprise-solutions/

06. IT CONSULTING

PAGE PURPOSE — Explain the advisory work in practical terms and show what a client can expect.

Suggested URL	/capabilities/it-consulting/
SEO title	IT Consulting & Technology Strategy | Einao Solutions
Meta description	Define requirements, assess business processes, evaluate technology options, and plan digital initiatives with Einao's IT consulting services.

Hero

H1: Make technology decisions with the problem clearly defined.

Technology projects can become expensive and difficult to deliver when requirements are unclear, workflows are poorly understood, or tools are selected before the organisation knows what it needs. Einao helps teams establish a clearer view of the operational problem and the technology response it calls for.

CTA: Discuss a Consulting Requirement | Destination: /contact/

What we help clarify

Business and process analysis

Understand how work is performed today, who is involved, what information is required, and where delays, duplication, or uncertainty occur.

Requirements definition

Translate stakeholder needs into a clearer description of the functions, workflows, users, data, and constraints a solution must address.

Process mapping

Make the current workflow visible, including hand-offs, approvals, decision points, exceptions, and dependencies.

Technology and solution assessment

Evaluate the problem before selecting an approach, considering whether process redesign, automation, integration, configuration, or custom development is appropriate.

Solution architecture and planning

Define the major components, relationships, dependencies, and implementation considerations needed to move from requirement to delivery.

A practical engagement

01 — Understand

Establish the business context, users, existing systems, constraints, and desired outcome.

02 — Analyse

Review processes, requirements, information flows, and the causes of the current difficulty.

03 — Define

Document the problem, priorities, solution options, and relevant implementation considerations.

04 — Plan

Set out the proposed scope, dependencies, delivery priorities, and next steps.

When to engage us

- Your organisation is considering a new system but has not yet defined its requirements.
- Teams rely on manual workarounds or unclear processes.
- Existing applications do not adequately support the way work is done.
- A digital initiative needs a clearer scope and implementation direction.
- You need to understand whether to automate, integrate, configure, or build.

CTA: Bring Us the Requirement | Destination: /contact/

07. BUSINESS PROCESS AUTOMATION

PAGE PURPOSE — Make automation tangible, realistic, and tied to operational work.

Suggested URL	/capabilities/business-process-automation/
SEO title	Business Process Automation & Workflow Solutions | Einao Solutions
Meta description	Improve workflows with process redesign, digital approvals, workflow automation, system integration, and operational reporting tailored to your organisation.

Hero

H1: Make the workflow work better.

As organisations grow, manual processes and informal workarounds become harder to manage. Approvals get delayed, information is entered repeatedly, reports depend on manual compilation, and teams struggle to see the status of work across departments.

Einao helps organisations analyse, redesign, and automate appropriate workflows so work can move through clearer steps, with better information flow and visibility.

CTA: Discuss a Process | Destination: /contact/

What can be improved

Process optimisation

Identify unnecessary steps, duplicated effort, avoidable hand-offs, and unclear responsibilities before deciding what to automate.

Workflow automation

Structure recurring activities, task assignments, notifications, and process stages so work follows a defined sequence rather than relying entirely on manual follow-up.

Digital approvals and escalations

Define routes for review, approval, rejection, and escalation, with status visibility and traceability appropriate to the process.

System integration

Connect relevant applications and services so information can move between systems with less repeated entry and fewer manual transfers.

Automated reporting and visibility

Reduce the effort required to compile routine operational information and support more consistent views of process activity.

Potential use cases

- Application, request, and case processing

- Internal approvals and document review
- Customer and service requests
- Data movement between business systems
- Routine notifications and status updates
- Operational reporting and management visibility

These are examples of potential use cases, not a guarantee that every workflow or integration is supported out of the box. Scope depends on the process, systems, data, and requirements.

How we approach automation

We assess the current process, define the intended outcome, identify what should change, design the workflow, and determine the appropriate combination of automation, integration, and supporting technology. The objective is not to automate every step; it is to improve the operation.

CTA: Identify a Workflow to Improve | Destination: /contact/

08. ENTERPRISE SOLUTIONS & DIGITAL DEVELOPMENT

PAGE PURPOSE — Present technical delivery depth without making unsupported promises about specific platforms.

Suggested URL	/capabilities/enterprise-solutions/
SEO title	Enterprise Solutions & Custom Software Development | Einao Solutions
Meta description	Einao designs enterprise applications, digital portals, workflow systems, integrations, and custom software around organisational requirements.

Hero

H1: Build the digital systems your organisation actually needs.

Not every operational requirement can be met by a generic application. Organisations may need systems that reflect specific workflows, service models, information structures, approval rules, user groups, and integration needs. Einao designs and implements digital solutions around those requirements.

CTA: Discuss a Digital Solution | Destination: /contact/

What we deliver

Enterprise applications and workflow systems

Support structured processes such as task assignment, review, assessment, approval, case handling, and status tracking, with capabilities defined by the requirements of the engagement.

Digital portals and service platforms

Create digital access points through which users can submit requests, provide information, upload documents, make payments where required, and follow the progress of a service.

Custom software and business applications

Design software around a defined operational requirement when available tools do not adequately support the intended workflow.

Document and information workflows

Organise the handling, review, retrieval, and movement of documents and information across relevant processes.

System integration

Connect new and existing applications, services, and data flows where technically feasible and within the agreed scope.

Implementation and ongoing improvement

Support deployment and subsequent maintenance or improvement where included in the engagement.

Designed around requirements

Every engagement begins with a clear understanding of users, processes, data, system dependencies, operating conditions, and the outcome the organisation needs. This shapes the scope and informs the design and implementation approach.

Specific details—including platforms, integrations, hosting, security controls, performance targets, service levels, and maintenance arrangements—should be documented and agreed for each project rather than assumed from general website copy.

CTA: Tell Us What You Need to Build | Destination: /contact/

09. SOLUTIONS OVERVIEW

PAGE PURPOSE — Give the solution portfolio a coherent home while separating product-specific facts from broader capabilities.

Suggested URL	/solutions/
SEO title	Enterprise Solutions & Digital Systems | Einao Solutions
Meta description	Explore Einao's digital solutions and enterprise systems for payment processes, organisational workflows, and specific operational requirements.

Hero

H1: Digital solutions for the work organisations need to get done.

Einao's solutions address practical operational needs: managing transactions, structuring workflows, coordinating information, and delivering services through digital systems. Explore the solutions below or speak with us about a requirement that needs a tailored approach.

PayX

H2: Digital payments with visibility built in.

PayX is positioned for organisations seeking a more structured way to collect and manage digital payments and maintain visibility over transaction activity.

(Details will come in clarity around the products increases)

CTA: Request a PayX Demonstration | Destination: /solutions/payx/

Fileonn

H2: Bring organisational work into a more structured digital flow.

(Details will come in clarity around the products increases)

CTA: Enquire About Fileonn | Destination: /solutions/fileonn/

Custom enterprise solutions

Some requirements need a solution shaped around a specific operating model. Einao works with organisations to define requirements and deliver digital systems, integrations, and workflows appropriate to the scope.

CTA: Discuss a Custom Requirement | Destination: /contact/

10. PAYX PRODUCT PAGE

PAGE PURPOSE — Create a credible product page without publishing unverified payment claims.

Suggested URL	/solutions/payx/
SEO title	PayX Digital Payment Solution | Einao Solutions
Meta description	Discuss PayX with Einao to explore a more structured approach to digital payment collection, transaction visibility, and payment reporting.

Hero

H1: Bring greater structure and visibility to payment operations.

PayX is a digital payment solution for organisations looking to manage payment activity through a more structured digital process. Speak with the Einao team to establish whether its confirmed capabilities align with your organisation's payment requirements.

CTA: Request a PayX Demonstration | Destination: /contact/

Explain the operational need

Payment processes can involve multiple channels, records, teams, and reconciliation steps. When information is fragmented, it can become difficult to maintain a clear view of transactions and prepare consistent reports. The right digital approach depends on the organisation's payment model and operational requirements.

Capabilities to confirm before publication

- Supported payment channels and payment service providers.
- Transaction tracking and status visibility.
- Reconciliation process and whether it is automated, assisted, or manual.
- Reporting and export capabilities.
- Supported integrations and technical prerequisites.
- User roles, permissions, audit history, and applicable security controls.
- Implementation model, support arrangements, and pricing approach.

CTA section

H2: Start with your payment requirements.

Tell us how your organisation currently collects payments, where visibility becomes difficult, and what your teams need to manage more effectively. We will use that conversation to determine fit and next steps.

CTA: Discuss PayX for Your Organization | Request a Demo | Destination: /contact/ or Form/

11. FILEONN PRODUCT PAGE

PAGE PURPOSE — Reserve a clear product destination while leaving unverified functionality out of public copy.

Suggested URL	/solutions/fileonn/
SEO title	Fileonn Digital Workflow Solution | Einao Solutions
Meta description	Contact Einao to learn about Fileonn and discuss whether its verified capabilities fit your organisation's workflow requirements.

Hero

H1: Give important organisational work a clearer digital structure.

Fileonn is part of Einao's solutions portfolio. The final product story should explain the specific organisational problem it addresses, the people who use it, and the way its confirmed capabilities support the workflow.

CTA: Enquire About Fileonn | Destination: /contact/

Product narrative to complete with the product owner

Use this page structure once the approved product specifications are available:

1. The operational problem Fileonn is designed to address.
2. Primary users and the organisations for which it is intended.
3. The core workflow, shown as a simple visual sequence.
4. Confirmed features and the practical purpose of each feature.
5. Supported integrations, deployment model, access controls, and technical requirements where applicable.
6. Implementation, training, support, and pricing approach where approved.

Publication rule

Do not invent features, integrations, compliance claims, performance results, or launch status. If a specification is not confirmed, leave it out until the product owner approves the wording.

CTA: Speak to Einao About Fileonn |Request a Demo | Destination: /contact/ or Form/

12. INDUSTRIES

PAGE PURPOSE — Show relevance to different operating environments without implying unsupported sector credentials.

Suggested URL	/industries/
SEO title	Technology Solutions for Government, Business & Institutions | Einao
Meta description	Explore how Einao's technology consulting, automation, and digital solution capabilities can support government, business, regulatory, and service organisations.

Hero

H1: Technology shaped around the realities of your organisation.

Different organisations face different operating conditions. The common requirement is technology that responds to real workflows, users, information needs, and service expectations. Einao starts with those realities before defining the right approach.

Government & public institutions

Public institutions may manage applications, approvals, records, payments, and services that involve multiple stakeholders and defined processes. Einao's work in institutional digital systems includes the IPO Nigeria portal engagement. We help define operational requirements and deliver or support digital systems according to the scope of each engagement.

CTA: Explore Institutional Experience | Destination: /work/ipo-nigeria-portal/

Businesses & corporates

As businesses grow, processes can become fragmented across teams, spreadsheets, and disconnected applications. Einao helps organisations assess their operations, improve workflows, connect systems, and define digital solutions that support their business requirements.

CTA: Discuss a Business Requirement | Destination: /contact/

Regulatory & service organisations

Organisations responsible for structured reviews, requests, applications, records, and service processes need clear information flows and dependable digital workflows. Einao can help assess those requirements and determine an appropriate automation, integration, or development approach.

CTA: Discuss Your Service Process | Destination: /contact/

Other organisational environments

Education, nonprofit, and development organisations may also benefit from well-defined workflows, connected information, and digital systems. Engagements should be described according to demonstrated experience and the actual requirements involved.

CTA: Tell Us About Your Organisation | Destination: /contact/

13. WORK AND CASE STUDIES

PAGE PURPOSE — Use evidence to demonstrate the nature of the work and the operational demands it addresses.

Suggested URL	/work/
SEO title	Digital Transformation Projects & Case Studies | Einao Solutions
Meta description	Explore selected work involving institutional digital platforms, technology consulting, process improvement, and enterprise solutions delivered or supported by Einao.

Hero

H1: The work behind systems people rely on.

The strongest way to understand a technology partner is to see how it approaches real requirements. Our case studies explain the context, the operational challenge, Einao's role, and the work involved—using only details approved for publication.

Case study card

IPO Nigeria Portal

Institutional digital platform | Federal Ministry of Industry, Trade and Investment — Commercial Law Department

Einao has provided IT consulting support to the Commercial Law Department since 2013, built the IPO Nigeria portal, and continues to support its maintenance, technical operation, optimisation, and upgrades.

CTA: Read the Case Study | Destination: /work/ipo-nigeria-portal/

Case study template for future projects

The context

Describe the organisation and service environment, using only details approved for disclosure.

The challenge

Explain the operational problem, constraints, users, or service requirement.

Einao's role

State precisely whether Einao consulted, designed, built, integrated, maintained, supported, or upgraded the system.

The approach

Describe the work and decision-making process at a level approved by the client.

The system or intervention

Explain the relevant capabilities without exposing sensitive information.

The evidence

Use verified metrics, approved client statements, or concrete deliverables. Do not invent outcomes.

What continued after implementation

Where accurate, explain ongoing support, maintenance, optimisation, or upgrades.

(There should be a way for us to keep editing this and adding case studies with time)

14. CASE STUDY — IPO NIGERIA PORTAL

PAGE PURPOSE — Tell a substantive story while accurately representing Einao's role.

Suggested URL	/work/ipo-nigeria-portal/
SEO title	IPO Nigeria Portal Case Study | Einao Solutions
Meta description	Read about Einao's work building and supporting the IPO Nigeria portal for the Federal Ministry of Industry, Trade and Investment's Commercial Law Department.

Hero

Eyebrow: SELECTED INSTITUTIONAL WORK

H1: Supporting the digital processes behind intellectual property services.

Einao's engagement with the Federal Ministry of Industry, Trade and Investment's Commercial Law Department dates to 2013. Einao built the IPO Nigeria portal and continues to support its technical operation, maintenance, optimisation, and upgrades.

Project context: institutional digital service delivery | Role: IT consulting, portal development, ongoing technical support and system improvement. Confirm the exact approved description before publishing.

The operational context

Digital services for intellectual property applications must support structured information submission and processing. The IPO Nigeria portal supports application processes relating to trademarks, patents, and industrial designs.

Einao's role

Einao's role includes building the portal and continuing to support it through maintenance, technical support, optimisation, and upgrades. The case study should distinguish these responsibilities clearly and should not imply that Einao owns the portal or the underlying government service.

Why ongoing support matters

A digital platform is not finished in operational terms simply because it has been launched. Systems need continued technical attention as requirements evolve, users interact with the service, and improvements become necessary. Ongoing support helps maintain the platform and address agreed technical needs.

Project facts and metrics

The following figures have previously been supplied for consideration: more than 53,000 registered users and more than 400,000 applications processed. Before publication, verify the figures, the date they refer to, the definition of an application processed, and approval to disclose them.

Recommended proof panel after verification: [Verified registered users] | [Verified applications processed] | [Verified period covered]. Do not publish placeholders.

What this engagement demonstrates

- Experience supporting an institutional digital service.
- The importance of connecting technical delivery with operational requirements.
- The need for continued maintenance and system improvement after launch.
- A long-running engagement with the Commercial Law Department, subject to approved wording.

Related capabilities

IT Consulting • Enterprise Solutions & Digital Development • Ongoing Technical Support and Optimisation (describe as a service only to the extent that it is part of Einao's current offering).

CTA: Discuss an Institutional Digital Requirement | Destination: /contact/

15. INSIGHTS

PAGE PURPOSE — Build topical authority and create useful entry points from search to service enquiries.
